

## Module 1 - Front-End Web Development

### **Bootstrap Store**

#### Overview

Create a bootstrap store (no functionality), each HTML page has to contain Bootstrap styling and look presentable.

#### Instructions:

**1. Create 4 files:**

- index.html(this will be your home page)
- products.html(this will contain the products you are selling, 8 products. )
- contact.html(this will contain a form for the user to send you an email, non functional)
- about.html(This will contain information about the owner of the business, ie. you)

**2. Requirements:**

- You will need a navbar that will direct the user to different pages.
- Make sure to include a footer(hint: make use on 100vh as a class name)
- You are only allowed to use bootstrap, NO EXTERNAL CSS stylesheet.
- The products have to be styled using a grid or flex
- You have to make use of a card, alert and carousel.
- You need to include an animation using animate.css or AOS(animate on scroll)

**3. CSS Requirements:**

- There are none!

## SUBMISSION

After completing the exercises, make sure to submit the created files on LMS
